Data Visualization using Tableau

Date:

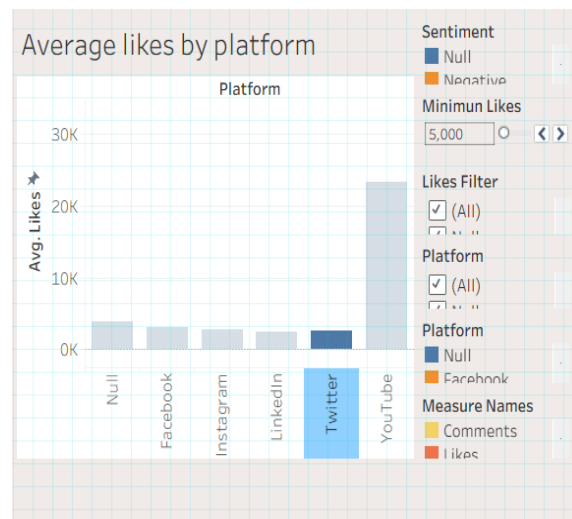

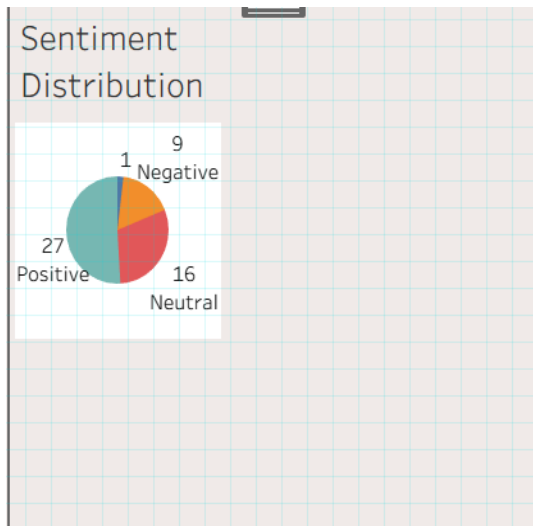

Aim:

To analyze social media post sentiment and compare the average likes received across different social media platforms using Tableau.

Algorithm:

1. Open Tableau and connect the given social media dataset.
2. Create a worksheet for Sentiment Distribution.
3. Use the Sentiment field to categorize posts into Positive, Negative and Neutral.
4. Create a pie chart to visualize the distribution of sentiments.
5. Create another worksheet for Average Likes by Platform.
6. Place Platform as the dimension and Likes as the measure.
7. Apply the Average aggregation to Likes.
8. Create a bar chart to compare average likes across platforms.
9. Combine the created worksheets into a Tableau dashboard.
10. Format the charts with suitable titles and filters.

Output:

RESULT:
