Data Visualization using PowerBI

Date:

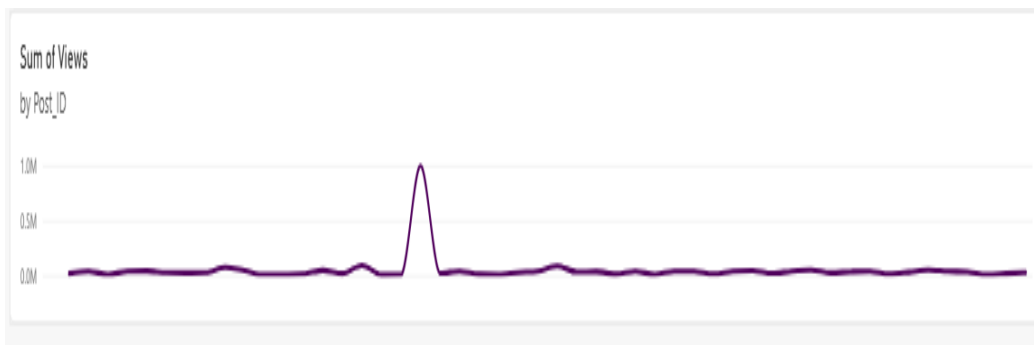

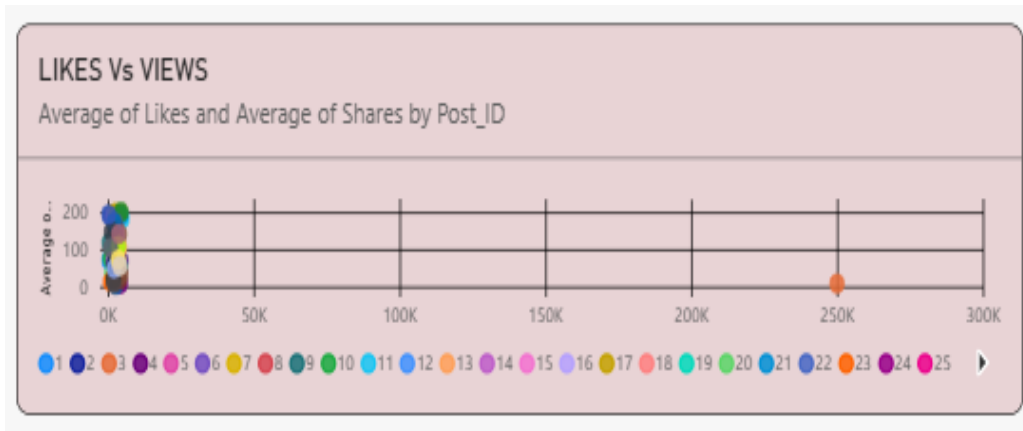

Aim

To create a line chart in Power BI to visualize the variation of views across different social media posts.

Algorithm

1. Open the Power BI report containing the social media dataset.
2. Select the **Line Chart** visualization from the Visualizations pane.
3. Drag the Post_ID field to the **X-axis**.
4. Drag the Views field to the **Y-axis**.
5. Set the appropriate aggregation for the Views field.
6. Add a suitable title such as **“Views Across Social Media Posts”**.
7. Format the chart by adjusting the axis titles, labels, and gridlines.
8. Observe the variation in views across different posts..

Output:

Result: Thus, the social media dataset was successfully imported into Power BI and basic visualizations were created to compare average Likes and Views across different social media platforms.
