

Exp No:6 c Data Visualization using PowerBI

Date:

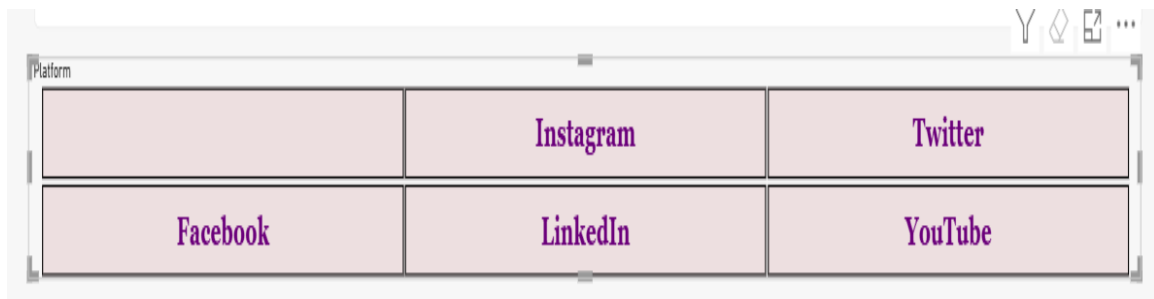

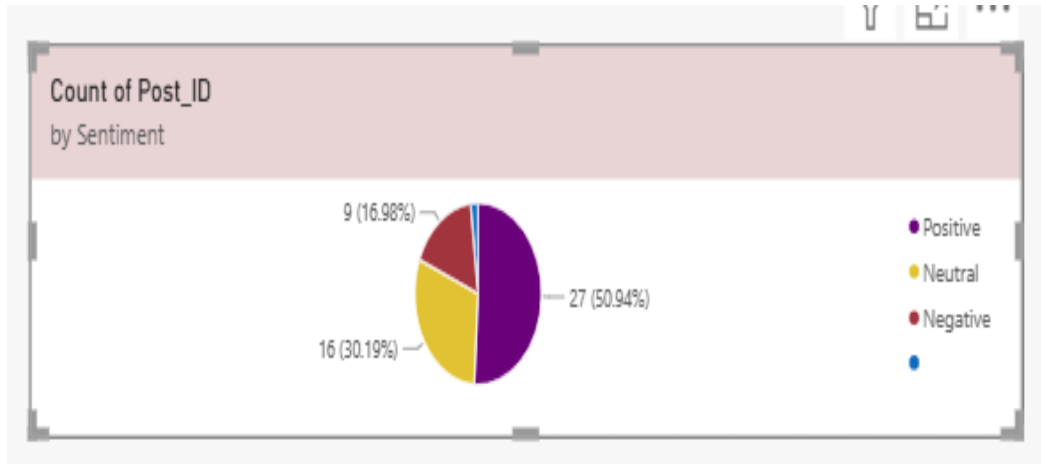

Aim

To create a pie chart and button slicers in Power BI to visualize the distribution of posts based on their sentiment.

Algorithm

1. Open the Power BI report containing the social media dataset.
2. Select the **Pie Chart** visualization.
3. Drag the Sentiment field to the **Legend** section.
4. Drag the Post_ID field to the **Values** section and set its aggregation to **Count**.
5. Add the title “**Sentiment Distribution**” to the pie chart.
6. Enable data labels and format the chart for better readability.
7. Select the **Slicer** visualization.
8. Drag the Platform field into the slicer's field section.
9. Change the slicer style to **Tile** to display the platform values as buttons.
10. Format the slicer for better visibility and arrange it on the report canvas.
11. Select different platform buttons and observe the changes in the visualizations.
12. Use the slicer to interactively filter the dashboard based on the selected platform.

Output:

Result: Thus, a pie chart and an interactive button slicer were successfully created in Power BI to visualize **sentiment distribution** and enable **platform-wise interactive filtering** of the social media data.
